Vincotech's new Press Fit Technology

--Reducing assembly time and cost--

Unterhaching, Germany – May 12, 2009 – Vincotech, a provider of power, GPS and hybrid modules used in industrial, solar and automotive applications, introduces its new press fit technology. The modules featuring this new pin technology are simply pressed rather than soldered into the PCB, thus reducing PCB assembly time and costs.

The Vincotech press fit pin design is well established in the automotive industry and provides a reliable and gas-tight connection to the PCB. By eliminating the necessity of a solder process for the module, the customer reduces the PCB assembly time and thereby the production costs. A higher production output capacity is the direct consequence.

Further advantages of Vincotech's press fit technology include reuse of the PCB and design flexibility. The module can be removed without damaging the PCB, thus allowing for the reuse of the PCB with a new module. Design flexibility is guaranteed by the elimination of the need for soldering; the module can easily be mounted on either side of the PCB at no extra cost or effort.

Vincotech's Press Fit Technology is DIN and IEC compliant and available upon request for all Vincotech proprietary module designs in pin-compatible versions to the current portfolio.

ABOUT VINCOTECH

Vincotech develops and manufactures subsystems and electronic components and offers manufacturing services geared to help customers to master complex challenges in electronics integration. Vincotech's extensive portfolio encompasses standard and tailored solutions, engineering services, and technical support for customers worldwide. These products and services contribute to sustainable, environmentally sound solutions that help modern society embrace mega-trends and explore new avenues.

With approximately 600 employees worldwide, backed by vast experience and a long history in electronics integration, Vincotech leverages these assets to help customers achieve maximum market success.
